SUMMARY

Junior full-stack developer who has independently built a Django-based e-commerce application from the ground up — data models, authentication, CRUD workflows, and admin tooling — and contributed to two team-based products (a live hackathon web app and a CRM ticketing module). Comfortable working across the stack: Django/Python on the backend, React on the frontend, with a working understanding of REST API consumption and relational database design. Looking to bring hands-on ownership to a frontend, backend, or full-stack engineering team.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+)
Backend: Django, Django ORM, REST API design & consumption, Django REST Framework (exposure)
Frontend: React.js, Redux, Next.js, HTML5, CSS3, Bootstrap
Databases: MySQL, PostgreSQL (pgAdmin)
Tools & Practices: Git, GitHub, Postman, Agile/team-based development, CRUD architecture

PROJECTS

E-Commerce Web Application — Personal Project (Django Full-Stack)

Designed and built a full-stack e-commerce web application independently using Django, Python, and MySQL, covering product catalog management, user accounts, and cart functionality.
Implemented user authentication (signup, login, logout, session handling) end-to-end using Django's built-in auth system, verified through manual testing of the full signup-to-login flow.
Modeled the relational database schema using Django ORM across core entities (Product, Category, Cart), supporting full CRUD operations for catalog and cart management.
Configured and customized the Django admin panel for product and category management, enabling non-technical catalog updates without code changes.
Built a responsive UI with Bootstrap, ensuring consistent usability across desktop and mobile viewports.

SkillLink — Job Discovery Platform (Hackathon Project) | Live: ***skillink-jobportal.vercel.app***

Collaborated with an 8-member cross-functional team to design and build SkillLink, a local job-discovery web application, within a 48-hour hackathon.
Developed frontend components in React for job/employee listing views, translating team UI requirements into reusable, presentation-ready components.
Shipped a live, publicly accessible production build on Vercel, used for real-time demo during hackathon judging.

Ticket Management Module — Team CRM Application (UPCODE, Feb–May 2026)

Built the ticket management module of a team-based CRM platform as 1 of 4 full-stack contributors, using Django and React.
Integrated the module with REST APIs (built via Django REST Framework by teammates) to fetch, display, and update ticket data dynamically in the React frontend.
Contributed to an agile, industry-style development cycle with sprint-based, iterative feature delivery over a 4-month build.

EDUCATION

Bachelor of Computer Applications (BCA) — IGNOU University (Distance Mode) | In Progress
Higher Secondary — CHMHSS Elayavoor | 07/2023 – 03/2025

TRAINING & CERTIFICATIONS

Python Full-Stack Development Program (ISO Certified Internship Certificate) — UPCODE Software Labs, Kannur (6 months)

AI for All — Intel India

Hackathon Participation Certificate — SkillLink Project

Skill Completion Certificates: HTML, CSS, Bootstrap, Git, REST API, Python, Django — UPCODE

ADDITIONAL

Upskilling Program — CCBP Academy (NxtWave), in progress

Languages: English, Malayalam
